

TABLE ASSEMBLY

Step 1:

Note: applying some candle wax or bar soap to the threads of the connecting bolts will make them easier to screw. Using a phillips head screwdriver, screw two connecting bolts into the holes drilled in each side leg.

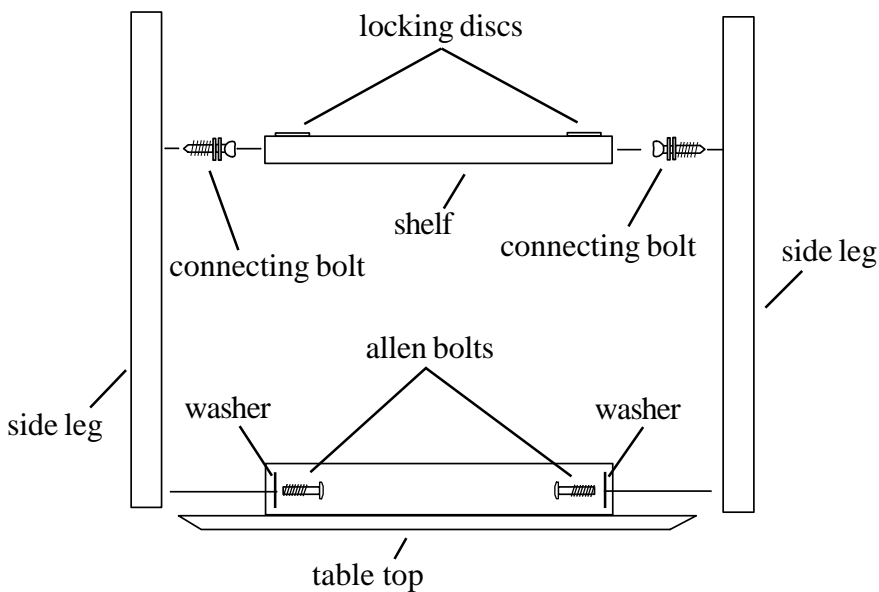

Step 2:

Lay the table top face down on the floor. Attach both side legs to the table top by inserting allen screws (with washers) through the holes in the table apron and screwing into the two threaded inserts toward the top of each side leg. Leave both side legs very loose at this step.

Step 3:

Turn the shelf so that the four locking disks built into the underside of the shelf face upward. Attach the shelf by sliding the two connecting bolts on each side leg into the corresponding holes in both ends of the shelf. Using a phillips head screwdriver, turn each locking disc clockwise until it stops. Now tighten all four of the allen screws which you had left loose in the previous step. Turn the table rightside up and enjoy.

Parts List	
1	table top
2	side legs
1	shelf
4	allen bolts
4	connecting bolts
4	washers
1	allen wrench
